## Screen Veneer Dryer

Proper for drying thin sliced veneers: transportation by screen, heating by hot water, thermal oil, steam, gasogene and others. Supplied with pneumatic and automatic systems for tractioning and controlling screens. Optionally stainless steel belts and automatic individual temperature control for each section. Dryers tighten with screws onto steel heavy frames, doors and panels perfectly sealed to avoid humidity infiltration through 4" glass wool insulation, frequency inverter, high efficiency radiators with finned elliptical tubes, high capacity fans with thermically isolated shafts and bushings, funnel bored system with higher number of nipple typed holes (more air) for greater speed of drying air, low wearing Teflon / graphitated bushings, central switchboard with all controls, tachometer, voltmeter, ammeter, etc.
